

# ZeoPro™

## SOIL AMENDMENT

### Guaranteed Analysis:

Soil Amending Ingredients

Zeolite (Clinoptilolite) Ore .....90.0%

Total Other Ingredients.....10.0%

F1194

Why use ZeoPro™?

ZeoPro™ is a soil amendment that, when added to a root zone improves plant performance. It is a zeoponic material developed by NASA as a growth media for long term space travel. It can be added to any other growth medium to amend the root zone and improve its performance as a growth medium.

### DIRECTIONS FOR USE:

Apply ZeoPro™ to any root zone or growth medium. Generally apply 10% by volume to the top 3" - 6" of the root zone. Mix the ZeoPro™ into the other material to create as much blending as practicable. When applying to existing turf as a topdressing best results will be obtained if the material is worked into the root zone via aerification, drill and fill or other method
